Abstract

The Patient Tracker is an innovative healthcare management system designed to streamline medical workflows and optimize patient care. Leveraging state-of-the-art technologies such as artificial intelligence, cloud computing, and data analytics, it provides a secure and centralized platform for healthcare professionals to access real-time patient records, manage appointments, monitor treatment progress, and facilitate seamless communication between teams. By improving care coordination and reducing administrative burdens, the Patient Tracker has the potential to enhance overall healthcare efficiency and patient satisfaction, making it a transformative solution for modern healthcare settings.
